Divided into three sections that assemble crosscutting issues, medical specialties, and surgical and related specialties, this book serves as a guide for clinicians of all backgrounds who will work with older patients as the demographic ages further. This second edition of Geriatrics for Specialists expands the number of specialist chapters to reflect growth in research in aging and clinical care for older people in dermatology, plastic surgery, and behavioral neurology. Part one sets the stage by establishing the rationale for creating a Lifestyle Medicine Center as well as the medical and economic burden it seeks to alleviate. The construction of the physical facility and all of the myriad details of the program and its key players are covered in part two, from the structural to the aesthetic, including informatics, developing patient resources and education tools, current technologies and applications, the role of the dietitian and exercise physiologist, inpatient consultation, the importance of community engagement, and more. Part three is comprised of case studies of existing, successful Lifestyle Medicine Centers across the country, with detailed descriptions of their history, development, programs and challenges. Chapters are supported with plentiful figures, tables and useful links. The burden of chronic disease in the U.S. and globally is growing, with pervasive direct and indirect multi-scale adverse effects on health and well-being, economics, and quality of life.
