[The World Wide Web and Databases](#) Jun 18 2021 This volume is based on the contributions to the International Workshop on the Web and Databases (WebDB'98), held in Valencia, Spain, March 27 and 28, 1998, in conjunction with the Sixth International Conference on Extending Database Technology (EDBT'98). In response to the workshop call for papers, 37 manuscripts were submitted to the program committee. The review process was conducted entirely by- mail. While the quality of submissions was generally high, only 16 papers could be accepted for presentation within the limited time allowed by the workshop schedule. Authors of workshop papers were invited to submit extended versions of their papers for publication in these post-workshop proceedings. The 13 papers appearing in this volume were submitted and selected after a second round of reviews. We would like to thank the program committee of WebDB'98, all those who submitted their work, all additional reviewers, and the conference officials of EBDT'98 for their invaluable support. Special thanks go to Paolo Meriardo, who actively participated in the organization of the workshop.

Technical Communication and the World Wide Web Dec 13 2020 Over the past decade, the World Wide Web has dramatically changed the face of technical communication, but the teaching of writing has thus far altered very little to accommodate this rapidly changing context. Technical Communication and the World Wide Web offers substantial and broadly applicable strategies for teaching global communication issues affecting writing for the World Wide Web. Editors Carol Lipson and Michael Day have brought together an exceptional group of experienced and well-known teacher-scholars to develop this unique volume addressing technical communication education. The chapters here focus specifically on curriculum issues and the teaching of technical writing for the World Wide Web, contributing a blend of theory and practice in proposing changes in curriculum and pedagogy. Contributors offer classroom examples that teachers at all levels of experience can adapt for their own classes. The volume provides comprehensive coverage of the technical communication curriculum, from the two-year level to the graduate level; from service courses to degree programs. This volume is an important and indispensable resource for technical writing educators, and it will serve as an essential reference for curriculum and pedagogy development in technical communication programs.

Internet and World Wide Web Sep 02 2022 Internet & World Wide Web How to Program, 5/e is appropriate for both introductory and intermediate-level client-side and server-side programming courses. The book is also suitable for professionals who want to update their skills with the latest Internet and web programming technologies. Internet and World Wide Web How to Program, 5e introduces students with little or no programming experience to the exciting world of Web-Based applications. This new edition focuses on HTML5 and the related technologies in its ecosystem, diving into the exciting new features of HTML5, CSS3, the latest edition of JavaScript (ECMAScript 5) and HTML5 canvas. At the heart of the book is the Deitel signature "live-code approach"—concepts are presented in the context of complete working HTML5 documents, CSS3 stylesheets, JavaScript scripts, XML documents, programs and database files, rather than in code snippets. Each complete code example is accompanied by live sample executions. The Deitels focus on popular key technologies that will help readers build Internet- and web-based applications that interact with other applications and with databases. These form the basis of the kinds of enterprise-level, networked applications that are popular in industry today. After mastering the material in this book, readers will be well prepared to build real-world, industrial strength, Web-based applications.

Learning and Teaching on the World Wide Web Jul 20 2021 This book is about using the Internet as a teaching tool. It starts with the psychology of the learner and looks at how best to fit technology to the student, rather than the other way around. The authors include leading authorities in many areas of psychology, and the book takes a broad look at learners as people. Thus, it includes a wide range of materials from how the eye "reads" moving graphs on a Web page to how people who have never met face-to-face can interact on the Internet and create "communities" of learners. The book considers many Internet technologies, but focuses on the World Wide Web and new "hybrid" technologies that integrate the Web with other communications technologies. This book is essential to researchers in psychology and education who are interested in learning. It is also used in college and graduate courses in departments of psychology and educational psychology. Teachers and trainers at any level who are using technology in their teaching (or thinking about it) find this book very useful. Key Features * Distinguished authors with considerable expertise in their fields * Broad "intra-disciplinary" perspective on learning and teaching on the Web * Focus on the Web and emerging Web-based technologies * Special attention to conducting educational research on-line * Emphasis on the Social and Psychological Context * Analyses of effective Web-based learning resources * Firmly grounded in contemporary psychological research and theory

Advertising and the World Wide Web May 18 2021 The chapters provide a wide-ranging view of issues addressing how advertisers can proceed on the Internet and World Wide Web. An initial chapter traces the development of Web advertising from its very beginnings as it was represented and discussed in the pages of Advertising Age. Although there is a noticeable trend to define Web advertising by comparing it to traditional media, it is clear that Web advertising just won't fit the old mold. Keith Reinhard of DDB Needham actually articulates this linkage between the old and new in his invited chapter. What the reader will encounter in Advertising and the World Wide Web is a solid conception of how Web advertising is different from anything that has come before. There are numerous discussions on consumer and advertiser interactivity, the role of Web advertising within larger campaigns, audience segmentation, and alternative Web-based promotion formats. The five sections cover definition and theory, structure, specific applications, legal issues, and the voice of the practitioner. Although there remain a few nay-sayers concerning the future of Web advertising, the reader will be able to see just how incredibly high-impact this new medium has become and the vast potential that it holds for future promotional endeavors.

The Information Revolution: Impact on Science and Technology Nov 11 2020 J.-E. Dubois and N. Gershon This book was inspired by the Symposium on "Communications and Computer Aided Systems" held at the 14th International CODATA Conference in September 1994 in Chambéry, France. It was conceived and influenced by the discussions at the symposium and most of the contributions were written following the Conference. This is the first comprehensive book, published in one volume, of issues concerning the challenges and the vital impact of the information revolution (including the Internet and the World Wide Web) on science and technology. Topics concerning the impact of the information revolution on science and technology include: • Dramatic improvement in sharing of data and information among scientists and engineers around the world • Collaborations (on-line and off-line) of scientists and engineers separated by distance . • Availability of visual tools and methods to view, understand, search, and share information contained in data • Improvements in data and information browsing, search and access and • New ways of publishing scientific and technological data and information. These changes have dramatically modified the way research and development in science and technology are being carried out. However, to facilitate this information flow nationally and internationally, the science and technology communities need to develop and put in place new standards and policies and resolve some legal issues.
