Ambitious and Anxious Nov 29 2019 Over the past decade, a wave of Chinese international undergraduate students—mostly self-funded—has swept across American higher education. From 2005 to 2015, undergraduate enrollment from China rose from under 10,000 to over 135,000. This privileged yet diverse group of young people from a changing China must navigate the complications and confusions of their formative years while bridging the two most powerful countries in the world. How do these students come to study in the United States? What does this experience mean to them? What does American higher education need to know and do in order to continue attracting these students and to provide sufficient support for them? In *Ambitious and Anxious*, the sociologist Yingyi Ma offers a multifaceted analysis of this new wave of Chinese students based on research in both Chinese high schools and American higher-

education institutions. Ma argues that these students' experiences embody the duality of ambition and anxiety that arises from transformative social changes in China. These students and their families have the ambition to navigate two very different educational systems and societies. Yet the intricacy and pressure of these systems generate a great deal of anxiety, from applying to colleges before arriving, to studying and socializing on campus, and to looking ahead upon graduation. *Ambitious and Anxious* also considers policy implications for American colleges and universities, including recruitment, student experiences, faculty support, and career services.

How Minority Students Experience College Aug 19 2021 Have three decades of integration and multicultural initiatives in higher education delivered a better education to all students? Do we know what a multicultural campus should look like, and how to design one that is welcoming to all students and promotes a learning environment? Through a unique qualitative study involving seven colleges and universities considered national models of commitment to diversity, this book presents the

views and voices of minority students on what has been achieved and what remains to be done. Facilitating the Integration of Learning Jun 04 2020 Students' ability to integrate learning across contexts is a critical outcome for higher education. Often the most powerful learning experiences that students report from their college years are those that prompt integration of learning, yet it remains an outcome that few educators explicitly work towards or specify as a course objective. Given that students will be more successful in college (and in life) if they can integrate their learning, James Barber offers a guide for college educators on how to promote students' integration of learning, and help them connect knowledge and insights across contexts, whether in-class or out-of-class, in co-curricular activities, or across courses and disciplinary boundaries. The opening chapters lay the foundation for the book, defining what integration of learning is, how to promote it and students' capacities for reflection; and introduce

the author's research-based Integration of Learning (IOL) model. The second section of the book provides practical, real-world strategies for facilitating integration of learning that college educators can use right away in multiple learning contexts. James Barber describes practices that readers can integrate as appropriate in their classes or activities, under chapters respectively devoted to Mentoring, Writing as Praxis, Juxtaposition, Hands-On Experiences, and Diversity and Identity. The author concludes by outlining how to apply IOL to a multiplicity of settings, such as a major, a single course, programming for a student organization, or other co-curricular experience; as well as offering guidance on assessing and documenting students' mastery of this outcome. This book is addressed to a wide range of educators engaged with college student learning, from faculty to student affairs administrators, athletic coaches, internship supervisors, or anyone concerned with student

development.

Student Affairs by the Numbers Sep 19 2021 Student Affairs by the Numbers aims to be the go-to book for student affairs professionals who want to know the basics of quantitative research and statistics for their work. Books on assessment in student affairs tend to discuss

processes more than research design and statistics. Most books on statistics share too much information for practitioners, overwhelming them and making it difficult to discern what they need to know. Since these books do not use examples from student affairs, it is even more difficult for practitioners to connect with new concepts. Student Affairs professionals need to know how to design a study, collect data, analyze data, interpret results, and present the results in an understandable manner. This book will begin by establishing the need for these skills in student affairs and then quickly move to how to develop a research culture, how to conduct research, how to understand statistics, and concluding with how to change our research/assessment behaviors in order to make higher education better for students.

Living-Learning Communities That Work

Feb 10 2021 Co-published with ACUHO-I  In 2007, the American Association of Colleges and Universities named learning communities a high-impact practice because of the potential of these communities to provide coherence to and ultimately improve undergraduate education.

Institutional leaders have demonstrated a commitment to providing LLCs, but they currently do so primarily with anecdotal information to guide their work. As a result, there is substantial variation in organizational structure, collaboration, academic and social environments, programmatic integration, student outcomes, and overall quality related to LLC participation. To establish a stronger, more unified basis for designing and delivering effective LLCs, the authors of Living-Learning Communities that Work collaborated on the development of a comprehensive empirical framework for achieving the integrating potential of LLCs. This framework is designed to help practitioners guide the design, delivery, and assessment of LLCs. This book thoughtfully combines research and field-tested practice to document the essential components for best practices in living learning communities and presents them as a clear blueprint –the LLC best practices model – for LLC design. Practitioners,

researchers, and institutional leaders can use the book as a guide to more effectively allocate resources to create and sustain LLCs and to realize the potential of these communities to improve undergraduate education.

Implementing Transfer Associate Degrees: Perspectives From the States Mar 26 2022 In recent years, a convergence of several forces—increased legislative involvement in higher education, governmental and philanthropic pressure to increase postsecondary degree and certificate production, and fiscal belt-tightening at colleges and universities across America—has resulted in efforts to significantly reform community college-to-university transfer and articulation processes. One increasingly popular method of reform is the implementation of transfer associate degrees: statewide pathways or degree programs that allow students to both earn an associate degree from a community college and transfer seamlessly into a state university with

junior status. This volume of *New Directions for Community Colleges* outlines the elements of effective transfer associate degrees and explores their implementation in six states. This is the 160th volume of this Jossey-Bass quarterly report series. Essential to the professional libraries of presidents, vice presidents, deans, and other leaders in today's open-door institutions, *New Directions for Community Colleges* provides expert guidance in meeting the challenges of their distinctive and expanding educational mission.

College Students in the United States May 28 2022 In this book, the authors bring together in one place essential information about college students in the US in the 21st century. Synthesizing existing research and theory, they present an introduction to studying student

characteristics, college choice and enrollment patterns, institutional types and environments, student learning, persistence, and outcomes of college. Substantially revised and updated, this new edition addresses contemporary and anticipated student demographics and enrollment patterns, a wide variety of campus environments (such as residential, commuter, online, hybrid), and a range of outcomes including learning, development, and achievement. The book is organized around Alexander Astin's Inputs-Environment-Outputs (I-E-O) framework. Student demographics, college preparation, and enrollment patterns are the "inputs." Transition to college and campus environments are the substance of the "environment." The "outputs" are student development, learning, and retention/persistence/completion. The authors build on this foundation by providing relevant contemporary information and analysis of students, environments, and outcomes. They

also provide strategies for readers to project forward in anticipation of higher education trends in a world where understanding “college students in the United States” is an ongoing project. By consolidating foundational and new research and theory on college students, their experiences, and college outcomes in the US, the book provides knowledge to inform policies, programs, curriculum and practice. As a starting point for those who seek a foundational understanding of the diversity of students and institutions in the US, the book includes discussion points, learning activities, and further resources for exploring the topics in each chapter.

Study skills. Their contributions to the English Language Proficiency Apr 02 2020 Wissenschaftliche Studie aus dem Jahr 2020 im Fachbereich Didaktik - Englisch - Pädagogik, Sprachwissenschaft, , Sprache: Deutsch, Abstract: The purpose of this research is to

highlight the contribution of study skills to academic competence. It investigates the actual denominators resulting in student's academic failure and addresses the issue of students' non-strategic ways of dealing with academic content. It also identifies scientific evidence-based strategies that are effective in helping students improve their study skills. Over 100 students completed a questionnaire to determine how study skills affect the students' academic achievements. In this respect, effective evidence-based strategies were grouped into taking notes, planning and organization, focus and concentration, and memory hacks. The research is composed of four chapters, whose general aim is to investigate the contribution of study skills to academic competence. The first chapter reviews the existing literature on study skills research and experiments, as well as the major findings in the field of study skills. The second chapter introduces the methodological procedures and research designs that were

utilized to elicit data. The third chapter demonstrates the results of the study along with a critical analysis of the variables involved. As for the fourth chapter, a discussion takes place elucidating different perceptions of the study's findings and implications. Finally, a conclusion of the study is drawn, and references are cited in the end. Academic competence is associated with the knowledge and application of effective study skills. Capable students at all grade levels may experience difficulty in school, not because they lack ability, but because they lack good study skills. Although some students develop study skills independently, even normally achieving students may go through school without having acquired effective approaches for studying. Implementing study-skills instruction relies on an understanding of the theoretical foundation for teaching and using study skills, as well as knowledge of current research on the effectiveness of study strategies. The purpose of this article is to articulate a theoretical

perspective on the contribution of study skills to academic competence, and to identify evidence-based strategies that are effective in helping students study.

Learning Through Serving Oct 21 2021 This substantially expanded new edition of this widely-used and acclaimed text maintains the objectives and tenets of the first. It is designed to help students understand and reflect on their community service experiences both as individuals and as citizens of communities in need of their compassionate expertise. It is designed to assist faculty in facilitating student development of compassionate expertise through the context of service in applying disciplinary knowledge to community issues and challenges. In sum, the book is about how to make academic sense of civic service in preparing for roles as future citizen leaders. Each chapter has been

developed to be read and reviewed, in sequence, over the term of a service-learning course. Students in a semester course might read just one chapter each week, while those in a quarter-term course might need to read one to two chapters per week. The chapters are intentionally short, averaging 8 to 14 pages, so they do not interfere with other course content reading. This edition presents four new chapters on Mentoring, Leadership, Becoming a Change Agent, and Short-Term Immersive and Global Service-Learning experiences. The authors have also revised the original chapters to more fully address issues of social justice, privilege/power, diversity, intercultural communication, and technology; have added more disciplinary examples; incorporated additional academic content for understanding service-learning issues (e.g., attribution theory); and cover issues related to students with disabilities, and international students. This text is a student-friendly, self-directed guide to service-learning

that:

- Develops the skills needed to succeed
- Clearly links service-learning to the learning goals of the course
- Combines self-study and peer-study workbook formats with activities that can be incorporated in class, to give teachers maximum flexibility in structuring their service-learning courses
- Promotes independent and collaborative learning
- Equally suitable for courses of a few weeks' or a few months' duration
- Shows students how to assess progress and communicate end-results
- Written for students participating in service learning as a class, but also suitable for students working individually on a project.
