The Sentient Enterprise Feb 24 2022 Mohan and Oliver have been very fortunate to have intimate views into the data challenges that face the largest organizations and institutions across every possible industry—and what they have been hearing about for some time is how the business needs to use data and analytics to their advantage. They continually hear the same issues, such as: We're spending valuable meeting time wondering why everyone's data doesn't match up. We can't leverage our economies of scale while remaining agile with data. We need self-serve apps that let the enterprise experiment with data and accelerate the development process. We need to get on a more predictive curve to ensure long-term success. To really address the data concerns of today's enterprise, they wanted to find a way to help enterprises achieve the success they seek. Not as a prescriptive process—but a methodology to become agile and leverage data and analytics to drive a competitive advantage. You know, it's amazing what can happen when two people with very different perspectives get together to solve a big problem. This evolutionary guide resulted from the a-ha moment between these two influencers at the top of their fields—one, an academic researcher and consultant, and the other, a longtime analytics practitioner and chief product officer at Teradata. Together, they created a powerful framework every type of business can use to connect analytic power, business practices, and human dynamics in ways that can transform what is currently possible.

Business Strategy Aug 09 2020 The effectiveness of a good strategy well implemented determines a business' future success or failure. Yet history is full of strategic decisions, big and small, that were ill-conceived, poorly organized and consequently disastrous. This updated guide looks at the whole process of strategic decision-making, from vision, forecasting, and resource allocation, through to implementation and innovation. Strategy is about understanding where you are now, where you are heading and how you will get there. There is no room for timidity or confusion. Although the CEO and the board decide a company's overall direction, it is the managers at all levels of the organization who will determine how the vision can be transformed into action. In short, everyone is involved in strategy. But getting it right involves difficult choices: which customers to target, what products to offer, and the best way to keep costs low and service high. And constantly changing business conditions inevitably bring risks. Even after business strategy has been developed, a company must remain nimble and alert to change, and view strategy as an ongoing and evolving process. The message of this guide is simple: strategy matters, and getting it right is fundamental to business success.

FORTUNE The Greatest Business Decisions of All Time Apr 04 2020 Decisions equal success-nothing happens until one is made. Businesses make millions of decisions every day. But once in a great while a leader makes a truly game-changing decision that shifts not only the strategy of a single company but how everyone does business. These big decisions are counterintuitive-they go against the conventional wisdom. In hindsight, taking a different direction may seem easy, but these bet-the-company moves involve drama, doubt, and high tension. What made Apple's board bring back Steve Jobs to the company? How did Johnson & Johnson decide to recall every bottle of Tylenol after a poisoning scare that involved only a small batch of the drug? What made Henry Ford decide to double the wages of his autoworkers, and how did that change the American economy for the next century? Here management consultant Verne Harnish, the CEO of Gazelles, and Fortune's editors provide the background stories behind the greatest business decisions of all time. In this fully original book, you'll get a glimpse into the thought processes leading up to these groundbreaking moments and will learn how the decisions have shaped the thinking of today's top leaders. The book also contains an insightful foreword by management guru Jim Collins, the author of *Built To Last* and *Good To Great*, which explains the importance of decision making in creating a successful company. **ADVANCED PRAISE FOR FORTUNE Greatest Business Decisions** "CEOs make thousands of decisions every year, but only a few of them have dramatic impact on a company's brand, performance, and culture. IBM knows something about those types of 'big bets.' This book is a concise look at some of those big decisions and the C-suite moves that separated winners from the competition." - Samuel J. Palmisano, Chairman and former CEO, IBM "A great resource! Learning about how others make great decisions can help you make great decisions! A fascinating, practical history that can change the way that you make decisions. Required reading for decision-makers- at all levels!" -Marshall Goldsmith, named the No. 1 Leadership Thinker in the World by Thinkers50, is a consultant and author of the New York Times bestsellers *MOJO* and *What Got You Here Won't Get You There*. "When you look at the best business decisions that have been made throughout the years, a clear pattern emerges: The best decisions require not only great insight, but courage and commitment as well. The greatest business leaders are the ones who focus their energy not solely on profits, but on improving people's lives. These important lessons from our past, which this book brings to light, are more relevant than ever today." -Bill Ford, Executive Chairman, Ford Motor

Business Analytics for Decision Making Dec 13 2020 *Business Analytics for Decision Making*, the first complete text suitable for use in introductory Business Analytics courses, establishes a national syllabus for an emerging first course at an MBA or upper undergraduate level. This timely text is mainly about model analytics, particularly analytics for constrained optimization. It uses implementations that allow students to explore models and data for the sake of discovery, understanding, and decision making. Business analytics is about using data and models to solve various kinds of decision problems. There are three aspects for those who want to make the most of their analytics: encoding, solution design, and post-solution analysis. This textbook addresses all three. Emphasizing the use of constrained optimization models for decision making, the book concentrates on post-solution analysis of models. The text focuses on computationally challenging problems that commonly arise in business environments. Unique among business analytics texts, it emphasizes using heuristics for solving difficult optimization problems important in business practice by making best use of methods from Computer Science and Operations Research. Furthermore, case studies and examples illustrate the real-world applications of these methods. The authors supply examples in Excel®, GAMS, MATLAB®, and OPL. The metaheuristics code is also made available at the book's website in a documented library of Python modules, along with data and material for homework exercises. From the beginning, the authors emphasize analytics and de-emphasize representation and encoding so students will have plenty to sink their teeth into regardless of their computer programming experience.

Business Decision Making, Second Edition Sep 02 2022 How do executives make decisions? Are their decisions conscious or unconscious? Can they explain each decision they make? What tools can they use to improve their decision-making process? These are some of the questions this book addresses. During the past 35 years, as an entrepreneur and senior executive of several medium-sized Canadian hi-tech businesses, the author noticed that his decision-making processes were often based either on experience or on advice received from colleagues. Seldom were the decisions based on formal or informal academic-based methods. There is no substitute for years of experience in any human endeavor. However, tapping into some of the methods and lessons learned from personal experience can result in useful principles for others to follow. These principles are very useful, especially for entrepreneurs interested in building their businesses or executives looking for some additional help in acquiring a better decision-making mousetrap.

Decision Making in Service Industries May 06 2020 In real-life scenarios, service management involves complex decision-making processes usually affected by random or stochastic variables. Under such uncertain conditions, the development and use of robust and flexible strategies, algorithms, and methods can provide the quantitative information necessary to make better business decisions. *Decision Making in Service Industries: A Practical Approach* explores the challenges that must be faced to provide intelligent strategies for efficient management and decision making that will increase your organization's competitiveness and profitability. The book provides insight and understanding into practical and methodological issues related to decision-making processes under uncertainty in service industries. It examines current and future trends regarding how these decision-making processes can be efficiently performed for better design of service systems by using probabilistic algorithms as well as hybrid and simulation-based approaches. Traditionally, many quantitative tools have been developed to make decisions in production companies. This book explores how to use these tools for making decisions inside service industries. Thus, the authors tackle strategic, tactical, and operational problems in service companies with the help of suitable quantitative models such as heuristic and metaheuristic algorithms, simulation, or queuing theory. Generally speaking, decision making is a hard task in business fields. Making the issue more complex, most service companies' problems are related to the uncertainty of the service demand. Decision Analysis for Managers Oct 30 2019 Everybody has to make decisions—they are unavoidable. Yet we receive little or no education or training on how to make decisions. Business decisions can be difficult: which people to hire, which product lines or facilities to expand and which to sell or shut down, which bid or proposal to accept, which process to implement, how much R&D to invest in, which environmental projects should receive the highest priority, etc. This book gives you all the tools you need to... • clarify and reach alignment on goals and objectives and understand trade-offs in reaching those goals, • develop and examine alternatives, • systematically analyze the effects of risk and uncertainty, and • maximize the chances of achieving your goals and objectives. Success (getting what you want) depends on luck and good decision making. You can't control your luck, but you can maximize your odds by making the best possible decisions, and this book gets you there. Broadly speaking, this book organizes and presents otherwise formal decision-making tools in an intuitively understandable fashion. The presentation is informal, but the concepts and tools are research-based and formally accepted.

Business Decision Making May 30 2022 Originally published in 1981. Risk is a problem which all business decision makers have to cope with. The problem is not insurmountable, however, as there now exist well-established techniques for minimising risk and for calculating which of various available options is the optimal one to pursue. This book outlines and discusses these techniques and the theories behind them. Unlike many economic theories which only rarely have any practical applications, the techniques put forward in this book can be used by real businessmen to solve real business problems. The book concentrates on decision-making in two main areas: the allocation of a firm's resources and the selection of new investments; and the techniques and theories discussed fall into three broad groups: linear programming, decision theory and capital market theory. Intended as an advanced undergraduate textbook for students taking business economics or managerial economics courses, this valuable book will interest specialists and students involved in management studies, microeconomics, strategic planning, operational research, accounting and MBA programmes.
