Internet Costs and Cost Models for Public Libraries May 16 2021 This report is the result of the statutory mandate by the National Commission on Libraries and Information Science (NCLIS) to promote activities to extend the nation's library and information handling capability as essential links in the emerging global information infrastructure. In a study to inventory the challenges related to libraries' roles in the National Information Infrastructure (NII), it was discovered that libraries had difficulty identifying and describing specific Internet costs. The cost elements, models, and worksheets presented here are intended to serve as useful guides for public libraries and communities in planning Internet connections and services. Five representative connectivity models and seven broad cost categories are identified for use by public libraries planning Internet connectivity and services. The value of this study rests more with the development of cost models, worksheets, and cost categories than with the costs represented in this report. However, the representative costs illustrate the significant variations that are possible in planning the networking permutations and configuration available to the public library community. For example, an initial one-time cost of $1,475 and a recurring annual cost of $12,635, a public library can establish a minimal level of single-workstation, text-based Internet connection. A more sophisticated representative multimedia connectivity model is described involving multiple workstations at multiple locations for a one-time cost of $266,375 and a recurring annual cost of $154,220, indicating the wide variation in cost and connectivity possibilities. The findings are intended to provide a basis for extending the benefits of advanced information services to the nation through its 9,050 public libraries. Models are illustrated through 14 figures. Two appendices provide research methodology and glossary of Internet terms. (Contains 14 references.) (Author/MAS)

Sam O. White, Alaskan Jun 16 2021 "This was an excellent book about a true

pioneer! A very interesting story about the life of an amazing man. Sam was generous, courageous, and a friend to everyone who had the privilege of knowing him." Sam O. White was a tough, deep-voiced, six-foot-tall, two-hundred-pound former Maine lumberjack and guide. From 1922, for half a century he crisscrossed wild Alaska by foot, with packhorses, dog teams, canoe, riverboat, and airplane. He helped map the Territory, trap fur, and became the world's first flying game warden. White wrote exciting tales about his Alaska adventures, and those writings make up the bulk of this volume. In 1927, he arrived at Fort Yukon as a game warden when millions of dollars worth of fine arctic furs annually arrived there. The hardy frontier trappers considered the new game warden a joke, but he quickly taught them to respect conservation laws. He was frustrated by the impossibility of adequately patrolling thousands of square miles by dog team, boat, and on foot, so with his own money, he bought an airplane. Pioneer pilots Noel and Ralph Wien taught him how to fly it. White then startled remote trappers and others by suddenly arriving from the sky. In 1941, lack of backing from Juneau headquarters caused him to resign as a wildlife agent. At Fairbanks, Noel Wien made him Chief Pilot for Wien Airlines. For the next two decades White flew as an Alaskan bush pilot, admired for his flying skill and the superior service he provided residents who flew with him, and who depended upon him for receiving mail and supplies. He had countless friends—one hundred arrived for his seventieth birthday party. His integrity and principles were of the highest. Decades after his death, he is still spoken of with awe by the long-time Alaskans.

Crowdsourced Geographic Information Use in Government Aug 26 2019 The acceptance of volunteered geographic information (VGI) as a valued and useful source of information for governments is growing at all levels. Put simply, VGI is "crowdsourced" geographic information provided by a wide range of participants with varying levels of education, knowledge and skills (see Michael Goodchild's writing for the original definition of the term). While a growing body of research demonstrates the reliability and accuracy of VGI when compared to official or government produced data sets, the progression towards their adoption and wider use is slow. There are a range of mechanisms and methods available for ensuring that crowdsourced information is fit for purpose so concerns about data quality are not the major reason for the lack of adoption. Instead, organizational practices, regulations and legal issues limit the rate of change. This report is based on a six-month study of the use of VGI by government and aims to provide a guide for the successful implementation of VGI.
