**Diagnosis** Oct 16 2021 One morning in 2000, Dr. Jane Hightower walked into her exam room to find a patient with disturbing symptoms she couldn't explain. The woman was nauseated, tired, and had difficulty concentrating, but a litany of tests revealed no apparent cause. She was not alone. Dr. Hightower saw numerous patients with similar, inexplicable ailments, and eventually learned that there were many more around the nation and the world. They had little in common—except a healthy appetite for certain fish. Dr. Hightower's quest for answers led her to mercury, a poison that has been plaguing victims for centuries and is now showing up in seafood. But this "explanation" opened a Pandora's Box of thornier questions. Why did some fish from supermarkets and restaurants contain such high levels of a powerful poison? Why did the FDA base its recommendations for "safe" mercury consumption on data supplied by Saddam Hussein's Ba'athist extremists? And why wasn't the government warning its citizens? In *Diagnosis: Mercury*, Dr. Hightower retraces her investigation into the modern prevalence of mercury poisoning, revealing how political calculations, dubious studies, and industry lobbyists endanger our health. While mercury is a naturally occurring element, she learns there's much that is unnatural about this poison's prevalence in our seafood. Mercury is pumped into the air by coal-fired power plants and settles in our rivers and oceans, and has been dumped into our waterways by industry. It accumulates in the fish we eat, and ultimately in our own bodies. Yet government agencies and lawmakers have been slow to regulate pollution or even alert consumers. Why? The trail of evidence leads to Canada, Japan, Iraq, and various U.S. institutions, and as Dr. Hightower puts the pieces together, she discovers questionable connections between ostensibly objective researchers and industries that fear regulation and bad press. Her tenacious inquiry sheds light on a system in which, too often, money trumps good science and responsible government. Exposing a threat that few recognize but that

touches many, Diagnosis: Mercury should be required reading for everyone who cares about their health.

**Sittig's Handbook of Toxic and Hazardous Chemicals and Carcinogens** Mar 09 2021 For more than a quarter century, Sittig's Handbook of Toxic and Hazardous Chemicals and Carcinogens has proven to be among the most reliable, easy-to-use and essential reference works on hazardous materials. Sittig's 5th Edition remains the lone comprehensive work providing a vast array of critical information on the 2,100 most heavily used, transported, and regulated chemical substances of both occupational and environmental concern. Information is the most vital resource anyone can have when dealing with potential hazardous substance accidents or acts of terror. Sittig's provides extensive data for each of the 2,100 chemicals in a uniform format, enabling fast and accurate decisions in any situation. The chemicals are presented alphabetically and classified as a carcinogen, hazardous substance, hazardous waste, or toxic pollutant. This new edition contains extensively expanded information in all 28 fields for each chemical (see table of contents) and has been updated to keep pace with world events. Chemicals classified as WMD have been included in the new edition as has more information frequently queried by first responders and frontline industrial safety personnel. \*Includes and references European chemical identifiers and regulations. \*The only single source reference that provides such in-depth information for each chemical. \*The two volume set is designed for fast and accurate decision making in any situation.

[The Mercury 13](#) May 11 2021 For readers of The Astronaut Wives Club, The Mercury 13 reveals the little-known true story of the remarkable women who trained for NASA space flight. In 1961, just as NASA launched its first man into space, a group of women underwent secret testing in the hopes of becoming America's first female astronauts. They passed the same battery of tests at the legendary Lovelace Foundation as did the Mercury 7 astronauts, but they were summarily dismissed by the boys' club at NASA and on Capitol Hill. The USSR sent its first woman into space in 1963; the United States did not follow suit for another twenty years. For the first time, Martha Ackmann tells the story of the dramatic events surrounding these thirteen remarkable women, all crackerjack pilots and patriots who sometimes sacrificed jobs and marriages for a chance to participate in America's space race against the Soviet Union. In addition to talking extensively to these women, Ackmann interviewed Chuck Yeager, John Glenn, Scott Carpenter, and others at NASA and in the White House with firsthand knowledge of the program, and includes here never-before-seen photographs of the Mercury 13 passing their Lovelace tests. Despite the crushing disappointment of watching their dreams being derailed, the Mercury 13 went on to extraordinary achievement in their lives: Jerrie Cobb, who began flying when she was so small she had to sit on pillows to see out of the cockpit, dedicated her life to flying solo missions to the Amazon rain forest; Wally Funk, who talked her way into the Lovelace trials, went on to become one of the first female FAA investigators; Janey Hart, mother of eight and, at age forty, the oldest astronaut candidate, had the political savvy to steer the women through congressional hearings and later helped found the National Organization for Women. A provocative tribute to these extraordinary women, The Mercury 13 is an unforgettable story of determination, resilience, and inextinguishable hope.

**Mercury from Gold and Silver Mining** Jan 07 2021 Due to its inherent characteristics, mercury contamination from gold mining is a major environmental problem compared to past mercury contamination from industrial point sources. The worsening of social-economical conditions and increasing gold prices in the late 1970s resulted in a new rush for gold by individual entrepreneurs for whom Hg amalgamation is a cheap

and easily carried out operation. Even after the present-day mining areas are exhausted, the mercury left behind will remain part of the biochemical cycle of the tropical forest. This book reviews the current information on mercury from gold mining, its cycling in the environment and its long-term ecotoxicological impact. The book is illustrated with numerous diagrams and photographs.

**Mercury** Sep 15 2021 "This astonishing young poet-still in her twenties-is surely destined to be one of the crucial voices of her generation."-Michael Silverblatt, Bookworm  
Composed in the direct, accessible, consciousness-piercing style readers of Ariana Reines' first two books are wildly enamored of, Mercury comprises a group of long poems. These interlocking works speak to the substance and essence of what is said, transmitted, transacted, "communicated" between persons. Reines proposes that substance and essence are opposites, and explores this in contexts including commercial cinema and internet porn. Your music makes me feel lonely

**The Right Stuff** Jan 27 2020 From "America's nerviest journalist" (Newsweek)--a breath-taking epic, a magnificent adventure story, and an investigation into the true heroism and courage of the first Americans to conquer space. "Tom Wolfe at his very best" (The New York Times Book Review) Millions of words have poured forth about man's trip to the moon, but until now few people have had a sense of the most engrossing side of the adventure; namely, what went on in the minds of the astronauts themselves - in space, on the moon, and even during certain odysseys on earth. It is this, the inner life of the astronauts, that Tom Wolfe describes with his almost uncanny empathetic powers, that made *The Right Stuff* a classic.

*Mercury Pictures Presents* Sep 27 2022 NEW YORK TIMES BESTSELLER • The epic tale of a brilliant woman who must reinvent herself to survive, moving from Mussolini's Italy to 1940s Los Angeles—a timeless story of love, deceit, and sacrifice from the award-winning author of *A Constellation of Vital Phenomena* “A genuinely moving and life-affirming novel that’s a true joy to read.”—Celeste Ng, author of *Little Fires Everywhere* “A gorgeous book . . . sublime.”—The New York Times (Editors’ Choice) Like many before her, Maria Lagana has come to Hollywood to outrun her past. Born in Rome, where every Sunday her father took her to the cinema instead of church, Maria immigrates with her mother to Los Angeles after a childhood transgression leads to her father’s arrest. Fifteen years later, on the eve of America’s entry into World War II, Maria is an associate producer at Mercury Pictures, trying to keep her personal and professional lives from falling apart. Her mother won’t speak to her. Her boss, a man of many toupees, has been summoned to Washington by congressional investigators. Her boyfriend, a virtuoso Chinese American actor, can’t escape the studio’s narrow typecasting. And the studio itself, Maria’s only home in exile, teeters on the verge of bankruptcy. Over the coming months, as the bright lights go dark across Los Angeles, Mercury Pictures

becomes a nexus of European émigrés: modernist poets trying their luck as B-movie screenwriters, once-celebrated architects becoming scale-model miniaturists, and refugee actors finding work playing the very villains they fled. While the world descends into war, Maria rises through a maze of conflicting politics, divided loyalties, and jockeying ambitions. But when the arrival of a stranger from her father's past threatens Maria's carefully constructed facade, she must finally confront her father's fate—and her own. Written with intelligence, wit, and an exhilarating sense of possibility, *Mercury Pictures Presents* spans many moods and tones, from the heartbreaking to the ecstatic. It is a love letter to life's bit players, a panorama of an era that casts a long shadow over our own, and a tour de force by a novelist whose work *The Washington Post* calls "a flash in the heavens that makes you look up and believe in miracles."

**Mercury Rising: John Glenn, John Kennedy, and the New Battleground of the Cold War** Apr 22 2022 A riveting history of the epic orbital flight that put America back into the space race. If the United States couldn't catch up to the Soviets in space, how could it compete with them on Earth? That was the question facing John F. Kennedy at the height of the Cold War—a perilous time when the Soviet Union built the wall in Berlin, tested nuclear bombs more destructive than any in history, and beat the United States to every major milestone in space. The race to the heavens seemed a race for survival—and America was losing. On February 20, 1962, when John Glenn blasted into orbit aboard *Friendship 7*, his mission was not only to circle the planet; it was to calm the fears of the free world and renew America's sense of self-belief. *Mercury Rising* re-creates the tension and excitement of a flight that shifted the momentum of the space race and put the United States on the path to the moon. Drawing on new archival sources, personal interviews, and previously unpublished notes by Glenn himself, *Mercury Rising* reveals how the astronaut's heroics lifted the nation's hopes in what Kennedy called the "hour of maximum danger."

**Mercury Poisoning** Feb 08 2021 Lupus, rheumatic fever, colitis, arthritis, dermatitis, insomnia, depression, hallucinations - what do all these illnesses have in common? They were all experienced by a 12-year-old girl in a case study in an American journal of child psychiatry. The cause? - mercury vapor she inhaled from mercury that had been spilled on the carpet in the room she slept in. After removing the carpet and treatment with chelation drugs, the girl returned to good health. Mercury poisoning can cause a variety of illnesses such as chronic fatigue, fibromyalgia, ADHD, bipolar disorder, sinusitis, tinnitus, balance problems, tremor, insomnia, inflammatory bowel disease, dermatitis, excessive thirst, salivation and a host of other symptoms. Is mercury from dental amalgams affecting your health? Dental associations claim the mercury in fillings is perfectly safe, but the mercury inhaled from "silver" fillings is 15 times more toxic than lead. The World Health Organization report states that people with amalgams have a daily mercury intake of 4 to 21 micrograms of mercury per day. For many people this exceeds the Environmental Protection Agencies limit of just 7 micrograms per day. Yet there are no Government warnings about this exposure. Those who grind their teeth or chew gum will have even higher exposure. If you eat 100 grams (3.5 ounces) of tuna, that adds another 35 micrograms. Even if your mercury blood level is within the so-called "normal" range, if you don't excrete mercury efficiently it can build up in your brain, liver, kidney, thyroid and other organs over years of continuous exposure. The effects of prolonged exposure to mercury can be delayed for years, making it difficult to determine the cause of your illness. Diseases such as chronic fatigue and fibromyalgia affect millions of people around the world. Doctors say the causes of these illnesses are unknown and there is no cure. This book provides cases histories of many diseases which were caused by mercury and subsequently cured using chelation therapy. It also takes you step by step through the process of safely chelating heavy metals from your body.

**Mercury** Jun 19 2019 Every wonder why so many modern chronic diseases that were unheard of a century ago seem to have no cure? Mercury is the second most toxic element known. It has been around long before modern humans ever began but its concentration in our environment and food has increased by over a factor

of 10 times since the beginning of the industrial revolution. Dr. Bill McGraw describes in amazing detail the whole story of mercury and how it came to be one of the biggest contributors of toxicity in the human body. From when and where it has been mined in the earth to how it became prevalent in so many polluting industries and most importantly, how it gets into our bodies and why it is so very hard to remove. Mercury, The Ultimate Truth and Chronic Disease contains the most complete description of the history of mercury toxicity, including the Minimater disaster from the 1950s to the present day. All major polluting industries are detailed including processes, locations, and current outputs. Chapters on mercury in fish and marine mammals are unprecedented in their scope and range while chapters on the description of pain and inflammation in the human body will leave no questions unanswered. Mercury is responsible for deadly Alzheimer's, debilitating chronic fatigue, ubiquitous cataracts, kidney disease, diabetes, heart disease, cancer, depression, arthritis, and allergies. The link between all of these ailments and mercury are explained in relation to all the relevant information available providing the ultimate truth about the relationship of this heavy metal to so many problems we now face. The modern forms of chelation, sweat therapy and other techniques for mercury removal from the human body are described in their entirety. This book has 45 graphs, maps, tables and pictures and includes information from over 500 sources from the latest scientific research papers to all of the well-known, modern health books so many readers of this book will recognize. This is the complete story of mercury that no one can afford to miss.

*Mercury* Mar 21 2022 Donald believes he knows all there is to know about seeing. An optometrist in suburban Boston, he is sure that he and his wife, Viv, who runs the local stables, are both devoted to their two children and to each other. Then Mercury—a gorgeous young thoroughbred with a murky past—arrives at Windy Hill and everything changes. Mercury's owner, Hilary, is a newcomer to town who has enrolled her daughter in riding lessons. When she brings Mercury to board at Windy Hill, everyone is struck by his beauty and prowess, particularly Viv. As she rides him, Viv begins to dream of competing again, embracing the ambitions that she had harbored, and relinquished, as a young woman. Her daydreams soon morph into consuming desire, and her infatuation with the thoroughbred escalates to obsession. Donald may have 20/20 vision but he is slow to notice how profoundly Viv has changed and how these changes threaten their quiet, secure world. By the time he does, it is too late to stop the catastrophic collision of Viv's ambitions and his own myopia. At once a tense psychological drama and a taut emotional thriller exploring love, obsession, and the deceptions that pull a family apart, *Mercury* is a riveting tour de force that showcases this "searingly intelligent writer at the height of her powers" (Jennifer Egan).

**Mercury Free** Sep 22 2019 Dr. James E. Hardy is one of the few dentists in the world who has never used a common "silver" (mercury) dental filling in his practice. He has written a book explaining why dental mercury should be banned. Consumers need to be more aware of dental mercury's dangers. Medical and environmental consequences of mercury exposure are covered. Practical advice is given on how to become

mercury-free by using safer, stronger replacements for amalgam. Mercury-Free is written in an easy-to-digest vignette format. The book's markets are dental consumers, health-care workers, the environmentally conscious, and concerned parents. The book is fully supported by more than 350 scientific references, and includes letters from people who have gone from sickness to health by becoming mercury-free.

*Mercury Handbook* Aug 26 2022 Mercury has many applications in scientific research and industry from amalgams for dental restoration to light bulbs. Developed from a combination of material originally published in Russian and the authors' research knowledge, this book provides a comprehensive treatise on the chemistry and metallurgy of amalgams. Coverage includes analysis, physico-chemical properties, electrochemistry, purification, inorganic and organic mercury chemistry, industrial application and synthesis and environmental aspects of mercury. This book provides a thorough understanding of amalgam metallurgy which is essential for academics, industrialists and postgraduates working in relevant fields. Guaranteed to bring a wealth of information, this book will be a welcome addition to the literature.
