List of North American Recent Mammals 1923 Oct 22 2021 The North American recent mammals in the United States National Museum number about 166,000 specimens, including 1,435 types. More than three-fourths of this material is in the Biological Survey collection, United States Department of Agriculture, the remainder, including the seals, sirenians, ceataceans, and all of the older, more historic specimens, is in the Museum proper. The material derived from these two sources furnishes so complete a representation of the mammals of North America that, of the 2,554 forms now recognized, only 171 are not included.

Painted Wood Oct 29 2019 The function of the painted wooden object ranges from the practical to the profound. These objects may perform utilitarian tasks, convey artistic whimsy, connote noble aspirations, and embody the highest spiritual expressions. This volume, illustrated in color throughout, presents the proceedings of a conference organized by the Wooden Artifacts Group of the American Institute for Conservation of Historic and Artistic Works (AIC) and held in November 1994 at the Colonial Williamsburg Foundation in Williamsburg, Virginia. The book includes 40 articles that explore the history and conservation of a wide range of painted wooden objects, from polychrome sculpture and altarpieces to carousel horses, tobacconist figures, Native American totems, Victorian garden furniture, French cabinets, architectural elements, and horse-drawn carriages. Contributors include Ian C. Bristow, an architect and historic-building consultant in London; Myriam Serck-Dewaide, head of the Sculpture Workshop, Institut Royal du Patrimoine Artistique, Brussels; and Frances Gruber Safford, associate curator of American decorative arts at the Metropolitan Museum of Art in New York. A broad range of professionals—including art historians, curators, scientists, and conservators—will be interested in this volume and in the multidisciplinary nature of its articles.

An Introduction to Native North America Jun 25 2019 The Second Edition of *An Introduction to Native North America* provides a basic introduction to the native peoples of North America, including both Eskimos and Indians. Beginning with a discussion of the geography of North America, this text delves into the history of research, basic prehistory, the European invasion, and the impact of Europeans on Native cultures. A final chapter covers contemporary Native Americans, including issues of religion, health, and politics. Much of the book is also written from the perspective of the ethnographic present, and the various cultures are described as they were at the specific times noted in the text.

Discovering North American Rock Art Feb 11 2021 From the high plains of Canada to caves in the southeastern United States, images etched into and painted on stone by ancient Native Americans have aroused in observers the desire to understand their origins and meanings. Rock paintings and engravings can be found in nearly every state and province, and each region has its own distinctive story of discovery and evolving investigation of the rock art record. Rock art in the twenty-first century enjoys a large and growing popularity fueled by scholarly research and public interest alike. This book explores the history of rock art research in North America and is the only volume in the past twenty-five years to provide coverage of the subject on a continental scale. Written by contributors active in rock art research, it examines sites that provide a cross-section of regions and topics and complements existing books on rock art by offering new information, insights, and approaches to research. The first part of the volume explores different regional approaches to the study of rock art, including a set of varied responses to a single site as well as an overview of broader regional research investigations. It tells how Writing-on-Stone in southern Alberta, Canada, reflects changing thought about rock art from the 1870s to today; it describes the role of avocational archaeologists in the Mississippi Valley, where rock art styles differ on each side of the river; it explores discoveries in southwestern mountains and southeastern caves; and it integrates the investigation of cupules along Georgia's Yellow River into a full study of a site and its context. The book also compares the differences between rock art research in the United States and France: from the outset, rock art was of only marginal interest to most U.S. archaeologists, while French prehistorians considered cave art an integral part of archaeological research. The book's second part is concerned with working with the images today and includes

coverage of gender interests, government sponsorship, the role of amateurs in research, and chronometric studies. Much has changed in our understanding of rock art since Cotton Mather first wrote in 1714 of a strange inscription on a Massachusetts boulder, and the cutting-edge contributions in this volume tell us much about both the ancient place of these enduring images and their modern meanings. *Discovering North American Rock Art* distills today's most authoritative knowledge of the field and is an essential volume for both specialists and hobbyists.

Athapaskan Migrations Mar 03 2020 Migration as an instrument of cultural change is an undeniable feature of the archaeological record. Yet reliable methods of identifying migration are not always accessible. In *Athapaskan Migrations*, authors R. G. Matson and Martin P. R. Magne use a variety of methods to identify and describe the arrival of the Athapaskan-speaking Chilcotin Indians in west central British Columbia. By contrasting two similar geographic areas—using the parallel direct historical approach—the authors define this aspect of Athapaskan culture. They present a sophisticated model of Northern Athapaskan migrations based on extensive archaeological, ethnographic, and dendrochronological research. A synthesis of 25 years of work, *Athapaskan Migrations* includes detailed accounts of field research in which the authors emphasize ethnic group identification, settlement patterns, lithic analysis, dendrochronology, and radiocarbon dating. Their theoretical approach will provide a blueprint for others wishing to establish the ethnic identity of archaeological materials. Chapter topics include basic methodology and project history; settlement patterns and investigation of both the Plateau Pithouse and British Columbia Athapaskan Traditions; regional surveys and settlement patterns; excavated Plateau Pithouse Tradition and Athapaskan sites and their dating; ethnic identification of recovered material; the Chilcotin migration in the context of the greater Pacific Athapaskan, Navajo, and Apache migrations; and summaries and results of the excavations. The text is abundantly illustrated with more than 70 figures and includes access to convenient online appendices. This substantial work will be of special importance to archaeologists, anthropologists, linguists, and scholars in Athapaskan studies and Canadian First Nation studies.
