Loose Leaf for The Living World Mar 02 2020 The Living World is often considered a student favorite. George Johnson has written this non-majors textbook from the ground up to be an engaging

and accessible learning tool with an emphasis on "how things work and why things happen the way they do". The Living World focuses on concepts rather than terminology and technical information, and features a straightforward,clear writing style and a wide variety of media assets to enhance the content of the textbook. Every chapter of this 9th edition is

focused directly on the relevance of its content to today's students. When the discussion of a topic is linked to a student's own experience, it does not seem so unapproachable, and the utility of learning it is far easier to accept.

Concepts of Biology Mar 14

2021 Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs

information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and

coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Loose Leaf for Understanding Biology Dec 11 2020 Overview A concise and engaging biology text for biology majors, Understanding Biology partnered with Connect

emphasizes fundamentals concepts to help students better understand biology and focus on developing scientific skills. Condensed chapters are centered on a learning path that serves to connect concepts within a chapter. The learning path begins with learning outcomes, which help students understand the core skills and concepts they should develop. Inquiry and Analysis cases help students build scientific skills, while scaffold end of chapter assessment ensures they not only grasp core concepts, but can also critically analyze and apply what they've learned. "Connecting the Concepts," a synthesis feature that ends every part, helps students

understand the connections between biological concepts, thus helping them "see" the big picture.

Reproductive Science and

Integrated Conservation Nov
09 2020 Reproduction is
essential to the continuation
and evolution of life on this
planet and is therefore a
centrally important process in
the conservation of wildlife.

However, reproductive
mechanisms are well
understood in only a handful of
vertebrate species, mostly
domestic livestock and
laboratory animals. This means
that attempts to develop and
implement management
policies for wildlife
conservation, and especially for
endangered species that, by
definition, are difficult to study,
are often based on poor data or
no data at all. In *Reproductive
Science and Integrated*

Conservation leading
authorities provide glimpses of
reproductive diversity in fishes,
amphibia, reptiles, birds and
mammals. Conservation plans
are founded on the assumption
that reproduction will be
successful, but what if it fails?
This book reviews the many
factors that influence
reproduction, including
genetics, behaviour and
nutrition, and experts assess
the potential conservation
relevance of the recent rapid
advances in reproductive
technology and medicine.

George believes that 'relevancy is the window' in which students can learn biology. is linked to a student's own experience, it does not seem so unapproachable, and the utility of learning it is far easier to accept.
