Project planning and the performance of information technology projects. Limits and possibilities Dec 31 2019 Research Paper (undergraduate) from the year 2018 in the subject Business economics - Supply, Production, Logistics, grade: 3.96, , course: Project Management, language: English, abstract: The broad objective of the study was to analyse the effect of project planning processes on performance of IT projects in CBE. Furthermore, this study will examine the impact of effective planning processes on quality of IT projects in CBE, analyse the impact of effective planning processes on IT project completion time in CBE and to investigate the impact of effective planning processes on IT project completion cost in CBE. In addition, this study aimed to fill the gap by answering the following research questions: What is the role of planning processes on quality of IT projects in CBE? What is the role of planning processes on IT project completion time in CBE? What is the role of effective planning processes on IT project completion cost in CBE? Projects play a major role in the economic development of a country. They are the building blocks for generating additional capital and for ensuring a flow of goods and services. The objective of the project management is to realize the planned project objectives and its project management has different phases and processes within it. Each phase contains rigorous and comprehensive activities to be performed. The success of any project is measured by its completion time, within the budget cost and meets the planned performance based on the initial plan. Therefore, planning has an important role on the project success. To accomplish all these projects successfully, each of them must undergo different phases where the level of efforts and impacts to the project success depends on the phases. Previous research has indicated inadequate project planning and analysis is one of the reasons for project failure. Moreover, research discovered that there is positive correlation between project planning effort and project success. According to their study findings there is a high correlation between the planning efforts and overall project success. Although their studies have considered many factors that influence project outcomes, but planning was mentioned as an important factor for project success.

Managing Web Projects Sep 27 2019 The cost of unsuccessful web projects runs into many millions; intranets that don't deliver, websites that customers won't use. Sometimes the problem is technological, but at other times, the project team has failed to understand some of the basic human dynamics involved, or have used processes that are inappropriate. Managing Web Projects describes how to manage a successful web-delivery project. Running throughout is a case study (based on a real occurrence) that is developed chapter by chapter to demonstrate project management concepts in the context of a web-delivery project. The book is illustrated throughout by examples, also drawn from actual cases of web-delivery projects. An appendix provides

essential planning forms described in the book as well as the forms for the case study project running throughout.

The Global Findex Database 2017 Feb 22 2022 In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at www.worldbank.org/globalindex.

E-Banking in India Dec 23 2021 ABOUT THE BOOK Finland was the first country in the world to have taken a lead in E-banking. In India, it was ICICI Bank which initiated E-banking as early as 1997 under the brand name Infinity. Electronic banking (E-banking) is a generic term encompassing internet banking, telephone banking, mobile banking etc. In other words, it is a process of delivery of banking services and products through electronic channels such as telephone, internet, cell phone etc. The concept and scope of E-banking is still evolving. E-banking facilitates an effective payment and accounting system thereby enhancing the speed of delivery of banking services considerably. While E-banking has improved efficiency and convenience, it has also posed several challenges to the regulators and supervisors. Several initiatives taken by the Government of India as well as the Reserve Bank of India (RBI) have facilitated the development of E-banking in India. The Government of India enacted the IT Act, 2000 with effect from October 17, 2000, which provides legal recognition to electronic transactions and other means of electronic commerce. The RBI has been gearing up to upgrading itself as a regulator and supervisor of the technologically dominated financial system. It issued guidelines on risks and control in computer and telecommunication system in February 1998 to all the banks advising them to evaluate the risks inherent in the systems and put in place adequate control mechanisms to address these risks, which can be broadly put under three heads, viz. IT environment risks, IT operations risks and product risks. The existing regulatory framework over banks has also been extended to E-banking. It covers various issues that fall within the framework of technology, security standards and legal and regulatory issues. This book contains 12 articles by scholars specialising in the area of banking. It will be useful for all those who want to understand recent technological developments in Indian banking.

Online Banking Security Measures and Data Protection Apr 02 2020 Technological innovations in the banking sector have provided numerous benefits to customers and banks alike; however, the use of e-banking increases vulnerability to system attacks and threats, making effective security measures more vital than ever. Online Banking Security Measures and Data Protection is an authoritative reference source for the latest scholarly material on the challenges presented by the implementation of e-banking in contemporary financial systems. Presenting emerging techniques to secure these systems against potential threats and highlighting theoretical foundations and real-world case studies, this book is ideally designed for professionals, practitioners, upper-level students, and technology developers interested in the latest developments in e-banking security.

Seeking Success in E-Business Sep 07 2020 In the foreword to this volume of conference proceedings for IFIP Working Group 8.4, it is appropriate to review the wider organization to which the Working Group belongs. The International Federation of Information Processing (IFIP) is a non-governmental, non-profit umbrella organization for national societies working in the field of

information processing that was established in 1960 under the auspices of UNESCO. IFIP's mission is to be the leading, truly international, apolitical organization which encourages and assists in the development, exploitation and application of Information Technology for the benefit of all people. At the heart of IFIP lie its Technical Committees that, between them, count on the active participation of some two thousand people world-wide. These Groups work in a variety of ways to share experience and to develop their specialised knowledge. Technical Committees include: TC 1: Foundations of Computer Science; TC 2: Software: Theory and Practice; TC 3: Education; TC 6: Communication Systems; TC 7: System Modelling and Optimization; TC 9: Relationship between Computers and Society; TC 11: Security and Protection in Information Processing Systems; TC 12: Artificial Intelligence and TC 13: Human-Computer Interaction. The IFIP website www.ifip.org has further details. Technical Committee 8 (TC8) is concerned with Information Systems in organisations. Within TC8 there are different Working Groups focusing on particular aspects of Information Systems.

A Measurement Framework for Software Projects Aug 26 2019 Software projects today are often characterized by poor quality, schedule overruns and high costs. Hence project decision makers need an objective and validated measurement framework to allocate limited resources and to track project progress. In this backdrop, based on the Goal-Question-Metric (GQM) model, Prashanth Harish Southeikal has come up with eight generic objective measures for the project stakeholders to base their corrective actions for successful project delivery . The measurement framework is validated (i) theoretically with measurement theory criteria and (ii) empirically with case studies (Controlled and Uncontrolled) including a global survey representing industry practitioners from 29 countries.

E-government in Europe Mar 02 2020 This book traces the development of e-government and its applications across Europe, exploring the effects of information and communication technology (ICTs) upon political action and processes. Explores a range of concepts and topics underpinning e-government in Europe: the degree to which e-government translates into genuine reform of government and public administration the dual role of the EU as both a provider of e-government through its own internal activities and also as a facilitator or aggregator in the way it seeks to engender change and promote its ethos in member states across the EU cyberterrorism and its use both by terrorists and governments to pursue political agendas. Featuring in-depth case studies on the progress of e-government in the UK, France, Germany, Denmark, The Netherlands, Portugal, Greece, Slovenia, Hungary, and Estonia. These case studies address the above issues, whilst at the same time highlighting commonality and diversity in practice and the paradox between top-down strategies and the effort to engage wider civil participation via e-government. e-Government in Europe will be of interest to students and scholars of public policy, politics, media and communication studies, computing and information and communications technologies and European studies.

Adoption of Electronic Banking in Ghana Banking System Oct 01 2022 Research Paper (postgraduate) from the year 2014 in the subject Business economics - Banking, Stock Exchanges, Insurance, Accounting, grade: A, Atlantic International University (School of Business and Economics), course: Ph.D. Economics, language: English, abstract: Electronic banking (e-banking) has brought about a revolution in the functioning of banks as it offers major opportunities to banks and their customers. This has made the transition to electronic banking a necessity for banks in order to be viable. Despite its benefits, developing countries still lag behind in the adoption of electronic banking. This study therefore seeks to examine the adoption of e-banking in the Ghanaian banking industry with Guaranty Trust Bank Ghana Limited (GTBank) as the case study to identify the benefits, challenges and critical success factors for the adoption of e-banking in the Ghanaian banking industry. The research made use of questionnaires and interviews to collect data from staff and customers of GTBank. The results of the study indicated that e-banking adoption was a business strategy taken by the bank in response to customer needs and the changing marketing trends in the banking industry. The benefits, challenges and critical success factors of e-banking are also identified and discussed. From the study it is obvious that tremendous benefits such as revenue generation, improvement in productivity and efficiency in service delivery and cost savings were derived from e-banking. The lack of a solid technology infrastructure was identified as a major challenge of e-banking adoption in the country. The study however revealed that there is a promising future for e-banking in Ghana. Some recommendations to enhance the adoption of e banking in country are made based on this study.

Planning for Information Systems Nov 21 2021 Edited by one of the best-known and most widely respected figures in the field, "Planning for Information Systems" is a comprehensive, single source overview of the myriad ideas and processes that are identified with IS planning. While many chapters deal with high level strategic planning, the book gives equal attention to on-the-ground planning issues. Part I, 'Key Concepts of IS Planning', focuses on how IS planning has evolved over the years; business-IS strategic alignment; and the role of dynamic organizational capabilities in leveraging IS competencies. Part II, 'The Organizational IS Planning Process,' describes IS planning in terms of critical success factors and includes a knowledge-based view of IS planning; a practical assessment of strategic alignment; the IT budgeting process; the search for an optimal level of IS strategic planning; and the role of organizational learning in IS planning. Part III, 'IS Investment Planning', deals with predicting the value that an IS project may have; a 'rational expectations' approach to assessing project payoffs; assessing the social costs and benefits of projects; an options-based approach to managing project risks; planning for project teams; and the moderating effects of coordinated planning. Part IV, 'Goals and Outcomes of IS Planning', considers information strategy as a goal and/or outcome of IS planning; IT infrastructure as a goal or outcome; competitive advantage as a goal or outcome; e-process partnership chains; and planning successful Internet-based projects.

Corporate customers acceptance of Internet banking: A case study of East African Trade Finance customers Mar 14 2021 It is increasingly more interesting to the bank managers to understand what is important to customers when it comes to Internet banking, and especially banking conducted by the customers themselves. Corporate customers and Internet banking have been studied very modestly in the past, especially the decision-making factors that drive customers to go online. The purpose of this research is to identify the factors that influence corporate customer's adoption of Internet banking services in Kenya, Uganda, Tanzania and Rwanda. The hypotheses are empirically evaluated by the use of Trade Finance customers of an East African bank that serves as a target sample. The Technology Acceptance Model (TAM) is the primary basis for the study. The information gathered from former studies that are mainly concentrating on private customers, acts as a foundation for the development of an extension of TAM that is suitable for corporate customers. The study involves 137 respondents from Kenya, Uganda, Tanzania and Rwanda. Due to the quantitative nature of the study, the results are analysed with statistical measures which include the use of SPSS in order to carry out regression analysis.
