School Readiness 2019 Noting that the latest messages communicated to the public about the learning problems of American children emphasize children's lack of social maturity and readiness, this book examines the many complex issues surrounding school readiness and entry. The 15 chapters are divided into 4 sections. The first section includes an introduction and overview of school readiness and a discussion of the concept of school readiness. The second section deals with assessing readiness. This section presents issues in early childhood screening and assessment, current readiness and screening tests, and an analysis of the Gesell School Readiness Test. Also discussed in this section is the social and emotional adjustment of children considered "young children." The third section examines school practices. This section covers issues in the entrance age debate, an analysis of the influence of entrance age on achievement, and the transition room experience. The fourth section discusses retention in kindergarten and first grade, intervention and remediation programs for young children, and issues affecting early childhood education. The final section of the book discusses related issues of parental reactions, and ethical and legal issues in the educational placement of children. The last chapter in this section offers a recapitulation with some final issues for consideration. Contains 19 pages of references. (VL)

STAAR EOC US History Assessment Flashcard Study Guide 2022
Various Types of Assessment in Education 2019 This book entitled, "Various types of assessment in education. Monitoring and evaluating success and failure in pedagogy", presents the assessment as a key component of education because it determines the extent to which pedagogy has been successful in imparting knowledge to learners. Thus, assessment comprises a wide variety of tests and methods that educators rely on to document, measure, monitor, and evaluate learners' educational needs, skill acquisition, learning progress, and academic readiness. Assessments are often equated to tests or examinations. It is a branch of standardized testing that was developed by companies to be administered to large populations of students. Educators are moving away from the idea that tests are the only component of assessment. Instead, they seek an increasingly diverse set of methods and tools that can measure complex and sophisticated benchmarks. Other tests are used internationally for comparative studies of educational achievement. Thus, the norm has been established that assessments serve several functions in much the same way as the tests. In addition, assessment requires the creation of new knowledge and the imaginative application of pre-existing knowledge. Students may be required to read and analyze different texts to complete assignments. Others require the practical development of tools that can facilitate social life. Assessments can be used to identify the weaknesses of learners, or some of them, which are then addressed in the curriculum or teaching method. Assessment can identify learner strengths to provide new and better opportunities for learners. An example of this is that assessments can identify advanced learners and require special forms of pedagogy. In the same vein, these assessments are critical in diagnosing or identifying learners with special needs. A specialized educational program can then be implemented to respond to the identified challenges. In other words, the assessment process can be positive or negative depending on how it is conceived and operated. All these topics are covered in the book in each of its chapters: Chapter 1: Typologies of assessment Part A, Chapter 2: Typologies of assessment Part B, Chapter 3: Typologies of assessment Part C, Chapter 4: Modalities of assessment, Chapter 5: Priorities in education and assessment, Chapter 6: Support for teachers and learners in assessment, Chapter 7: Key challenges in education and assessment, Chapter 8: Educational assessment and reform agendas. In this book, "Various types of assessment in education. Monitoring and evaluating success and failure in pedagogy", the aim is to free students from the constraints caused by evaluations. The importance of continuous and holistic assessment is emphasized.
