The Price of Precaution and the Ethics of Risk May 04 2020

Christian Munthe undertakes an innovative, in-depth philosophical analysis of what the idea of a precautionary principle is and should be about. A novel theory of the ethics of imposing risks is developed and used as a foundation for defending the idea of precaution in environmental and technological policy making against its critics, while at the same time avoiding a number of identified flaws. The theory is shown to

have far-reaching practical conclusions for areas such as bio-, information- and nuclear technology, and global environmental policy in areas such as climate change. The author argues that, while the price we pay for precaution must not be too high, we have to be prepared to pay it in order to act ethically defensible. A number of practical suggestions for precautionary regulation and policy making are made on the basis of this, and some challenges to basic ethical theory as well as consumerist societies, the global political order and liberal democracy are identified. Munthe's book is a well-argued contribution to the PP debate, putting neglected justificatory and methodological questions at the forefront. His many discussions of alternative accounts as well as his drawing out the consequences of his own suggestion in practical cases give the reader a thorough, holistic sense of what justification of PP amounts to. /.../ Munthe's main case, his argumentation for the requirement of precaution as a moral norm, is convincing and puts a strong pressure on too narrow alternative suggestions on how it should be perceived and justified, and he launches a plausible defence of its practical usability.

Costing and Pricing in the Digital Age Nov 02 2022 The proliferation of electronic information services has been retarded

as much by the novel aspects of the pricing and accounting of resources they represent as by fear of technology or tight budgets. Library provision poses special problems as it must accommodate a mixed economy: commitment to good public services, and cost-driven financial planning. Who should be responsible for network services spread across different cost centers? What are the costs that are masked by site licensing and top-slicing? Can economic and fiscal models guide those who plan for networked services? Incorporating step-by-step instructions, problem-solving techniques and broad case study material, this practical primer will help the reader address these concerns. This text is essential reading for all information providers and suppliers of electronic services, including managers in academic and public libraries, and will also be of great interest to students of librarianship and information management.
