From Curing to Caring Oct 23 2021 I progressi medici degli ultimi decenni hanno trasformato le prospettive per le persone che ancora oggi convivono con l'HIV la cui aspettativa di vita media, se la cura è precoce e continuativa, risulta notevolmente incrementata. Tali rilevanti progressi hanno modificato anche la percezione dello stato di salute che non è più vissuto come una sentenza di morte. Tuttavia l'AIDS è ancora causa di morte nei paesi più poveri del mondo e continua a generare stigma e a produrre esclusione, discriminazione e marginalità sociale un po' ovunque. Inoltre il numero di persone nel mondo che vivono con questa infezione è in aumento da un decennio, anche come conseguenza della riduzione delle informazioni sul tema. Partendo da queste considerazioni, il volume, con l'approccio interdisciplinare che intreccia insieme i contributi di scienziati sociali con quelli di medici e attivisti, si propone l'obiettivo di fare il punto della situazione sulla questione e dibatte sui temi più propriamente legati alle rappresentazioni sociali e culturali di HIV e AIDS oltre che sulla qualità della vita delle persone che ne sono interessate. Il libro è diviso in due parti: la prima sulla costruzione culturale e sociale di HIV/AIDS e la complessità delle dimensioni della cura, dall'infezione alla presa in carico; la seconda sulle narrative biografiche, con particolare riferimento ad atteggiamenti, informazioni e qualità della vita.

Rational Basis for Clinical Translation in Stroke Therapy Apr 04 2020 Stroke remains one of the major causes of death and long-term disability worldwide. Currently, the only approved therapy for the acute treatment of this disease is thrombolysis, a strategy that can only be applied to a small percentage of patients due to its narrow therapeutic window. Unfortunately, during the last years numerous promising drugs that showed neuroprotection in the experimental setting failed to translate into the clinic because of their toxicity or lack of efficacy. Researchers in the field now face the crucial need to develop effective stroke therapies and successfully translate novel strategies into the clinical setting. *Rational Basis for Clinical Translation in Stroke Therapy* presents the most recent promising preclinical approaches and the most updated clinical evidence for treating stroke patients. By bringing together the experience of accomplished stroke researchers and clinicians, the book is a useful tool for improving the treatment and management of stroke patients. The book describes current approaches for the management of stroke patients including thrombolysis and mechanical recanalization procedures as well as other clinically relevant topics such as diagnosis, imaging, risk factors, and prevention. Also described are emerging interventions based on the use of stem cells, botulinum toxin, and antidepressants which complement emergency stroke treatment and conventional rehabilitation procedures. Clinical approaches are integrated with the most promising therapeutic opportunities based on targeting the immune system, hypothermia, and postconditioning. The book also covers issues related to the improvement of R&D strategies in stroke therapeutics, aimed at the implementation of preclinical approaches with stroke model guidelines and at the optimization of clinical trial design. This volume is a reference for all those interested in the rational development of novel stroke therapeutics.
