Over 1,000 total pages .... INTRODUCTION 1-1.1 Purpose. This chapter provides a general history of the  
development of military diving operations. 1-1.2 Scope. This chapter outlines the hard work and  
dedication of a number of individuals who were pioneers in the development of diving technology. As with  
any endeavor, it is important to build on the discoveries of our predecessors and not repeat mistakes of  
the past. 1-1.3 Role of the U.S. Navy. The U.S. Navy is a leader in the development of modern diving and  
underwater operations. The general requirements of national defense and the specific requirements of  
underwater reconnaissance, demolition, ordnance disposal, construction, ship maintenance, search, rescue  
and salvage operations repeatedly give impetus to training and development. Navy diving is no longer  
limited to tactical combat operations, wartime salvage, and submarine sinkings. Fleet diving has become  
increasingly important and diversified since World War II. A major part of the diving mission is  
inspecting and repairing naval vessels to minimize downtime and the need for dry-docking. Other aspects  
of fleet diving include recovering practice and research torpedoes, installing and repairing underwater  
electronic arrays, underwater construction, and locating and recovering downed aircraft.
